The World's longest short hole drill: CoroDrill® DS20

The CoroDrill® DS20 has the longest reach: It's the first indexable drill in the metalworking world that goes to 7 times diameter. No more flipping over of big components to drill from the other side just because the indexable drill's length falls short of your component's requirement. After seven years of development, the CoroDrill® DS20 is set to become the benchmark for deep and high-precision drilling. Watch this demo film to see the CoroDrill DS20® in action.

CoroTurn® Prime SL head: Internal PrimeTurning™ for smaller diameters

With CoroTurn® Prime SL heads it is now possible to use internal PrimeTurning™ for hole diameters down to 40 mm (1.575 inch).

This will help you to increase your productivity and achieve excellent chip control. To secure maximum output, use the CoroPlus® ToolPath software that now also supports internal PrimeTurning™ applications.

CoroPlus® Tool Path update: Including internal PrimeTurning™ & thread turning operations

The CoroPlus® Tool Path software now includes 2 different modules, PrimeTurning™ & thread turning.

The PrimeTurning™ module is updated to supply programming codes and techniques to secure maximum output for internal PrimeTurning™ operations. The thread turning module is completely new, offering programming support for external and internal threadturning operations.

A robust drill for tough materials

Designed with a focus on industries where demands for rigorous processes and stringent quality are extremely high, the CoroDrill® 860 with -SM geometry is an optimized solution for short-hole drilling in ISO S materials such as heat-resistant super alloys (HRSA), titanium and Inconel.

Featuring a consistent cutting edge with a brand-new coating and excellent dimensional accuracy, the drill offers robust machining security and repeatable drilling performance in tough materials.
